

## CLEAN EQUIPMENT LOG

NOP 205.201 (a) (5) states that a organic crops producer must manage organic production systems sufficient to: “prevent contamination from prohibited substances or commingling of organic and conventionally produced products.” All equipment, including harvesting containers, used in organic crops and wild crops production and harvesting must be cleaned or flushed prior to use on organic fields or crops to ensure that the product is free of non-organic crops and prohibited materials. Please complete and retain in your records for review by your inspector during certification inspection.
